BEST IN CLASS
OUTDOOR LIVING

Sustainable. Designed.

Best in class decking

Ultra high performance & low maintenance

Sustainable

Smart design

Designed in Finland, Made in Germany

European leader in sustainability and the circular economy

35 m² of decking = up to 500 kg of plastic and paper waste, without compromising high performance.

This equals the average annual amount of municipal waste in EU per person.

At the end of the lifecycle, decking material can be either reused or recycled, as it is 100% toxin free.

This binds over 800 kg of CO₂.
CO₂ captured in decking equals over 4 months average emissions of a car driven in Europe

Decking has a long life span with up to 25 years guarantee in residential use.
This builds a carbon emission storage for a generation.

NEW
