

UPM ProFi Click System

The fastest deck installation system ever?

UPM ProFi Click System cuts the typical deck installation time by more than a half,* and yet enables the finest professional finish possible.

What's more, the system has been ergonomically designed to minimize the amount of time the professional installer spends on his knees bent over the deck.

designed in **FINLAND**
made in **GERMANY**

10 years of **WPC**
technology

* Example:

1 person
10 m²
1 hour

in case ground is even and
UPM ProFi Foot is used

Created for professional deck installation, UPM ProFi Click System combines the best in design from Germany and Finland. Every aspect of traditional deck building has been revisited by UPM ProFi's design team:

- Each component contains innovative design details that either reduce installation time or enhance deck performance.
- The whole sub-frame and deck can be built without drilling or screw fixing.
- The deck boards are installed with a click system and locked into place with a unique fixing clip that ensures board end gaps remain constant throughout the years.
- For the perfect deck edging, a special click system has been designed enabling UPM ProFi's Rail Step to be installed.

Best of all, nearly all the preparation work can be done at work bench height, thereby saving the professional installer hours of work on his knees with a bent back.

Click system phases: No pre-drilling or screws are needed

Click the clips into the rails

Prepare the sub-construction frame with corner piece

Click the feet onto the rails

Click the deck boards onto the frame

UPM ProFi Click System: Sub-construction can be prepared at workbench height, saving backs and knees

Properties:

Design: State of the art installation system, integrated sub-construction and board system. Designed for UPM ProFi Deck 150/Deck 150 UV+ boards.

Material: Components are made from long lasting stainless steel, powder coated or anodized aluminum and high performance polymers.

Installation: Super-fast click installation: typically 50–70% faster compared with traditional installation

methods. Saves backs and knees: preparation work can be done on trestles. No pre-drilling or screws are needed. Changing of single deck boards is possible with ease.

Installation to public areas: Rapid de-installation and re-installation: ideal for temporary decks, for example street restaurants and exhibition decks.

UPM ProFi Click System components:

UPM ProFi Foot

- Small/Medium/Large
- ✓ Enables raised decks from 35 mm to 225 mm
- ✓ Designed for fast click installation with support rail
- ✓ Max loading ranging from 800 to 1200 kg per foot

UPM ProFi Click Clip

- ✓ Enables fast and firm twist-lock installation of deck boards
- ✓ Individual boards can be easily de-installed without damage
- ✓ Allows normal lengthways thermal expansion/contraction and correct widthways spacing

UPM ProFi Click Alu Support Rail Large

- ✓ Creates strong and durable structural frame for decks
- ✓ Supplied with pre-drilled holes for Click Clips, enabling fast installation of deck boards at work bench height saving time, back and knees
- ✓ Spans up to one metre between feet thereby minimises costs and installation time as fewer feet are needed
- ✓ Max loading of 400 kg/m²

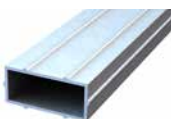

UPM ProFi Direct Fix Clip

- ✓ Eliminates board "wander": boards stay in position & end gaps remain even
- ✓ Twist and locks into support rail: no screws or drilling needed

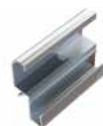

UPM ProFi Click Start Clip

- ✓ Enables fast installation of first and last deck boards
- ✓ Click installation: no screws or drilling

UPM ProFi Connector for Click Alu Support Rail Large

- ✓ Enables strong and stable lengthwise connection of support rail
- ✓ Eliminates waste from off-cuts and reduces installation time

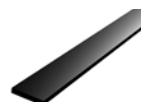

UPM ProFi Click Rail Step Clip

- ✓ Enables fast installation of UPM's patented Rail Step board for the best looking and hardest wearing deck edges
- ✓ Click installation: no screws or drilling

UPM ProFi Corner Piece

- ✓ Enables strong and stable 90 degree connection of support rails
- ✓ Fast construction of a rigid frame without drilling and screws: slots into support rail groove, and is fixed with an Allen key

UPM ProFi Quiet Tape

- ✓ Dampens sound vibrations for ultimate quiet deck
