

The Biofore Company **UPM**

Excellent solution for hard and even surfaces

UPM ProFi Support Rail is part of the UPM ProFi complete decking system. UPM ProFi Support Rail is installed directly on a hard, flat surface, such as concrete or flat ground. Installation is effortless and fast.

UPM ProFi Support Rail is:

- The most economic solution for building deck sub constructions
- Installed on hard and flat surfaces
- Low moisture absorbing and thus is durable in all weather conditions
- Easy to work with (machines like wood)
- Environmentally-friendly: material is non-toxic, and is an efficient use of recycled material
- Available in all UPM ProFi Deck 150 colours

Pearl Grey

Sunny Beige

Silver Green

Chestnut Brown

Night Sky Black

Autumn Brown

Stone Grey

Environment

UPM ProFi Support Rail is manufactured to save the environment. The hollow core makes the UPM ProFi Support Rail lighter and thus reduces CO₂ emissions during its lifecycle.

Approximately 60% of UPM ProFi Support Rail production materials are by-products of label laminate production. The principal materials used to make UPM ProFi Deck are specially selected cellulose based fibres and clean plastic polymers which, as by-products of other industrial processes, would otherwise be disposed of in landfill or incineration.

All UPM ProFi products are non-toxic and do not contain PVC.

Resists moisture

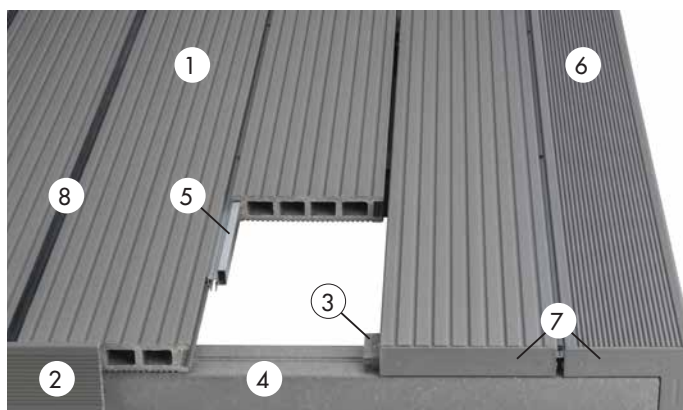

UPM ProFi Support Rail absorbs very little moisture and is therefore durable in all weather conditions. This makes it a long-lasting material compared to a wooden structure. UPM ProFi Support Rail does not rot even if it is installed directly on a flat ground.

Installation

UPM ProFi Support Rail can be machined like wood. The terrace can easily be installed on a hard, flat surface.

UPM ProFi Support Rail can be installed on rubber pads to compensate for small changes in ground level.

UPM ProFi Deck 150: Complete decking system with matching components:

1. Decking boards
2. Cover Strip
3. T-Clip, small & screw
4. Support Rail
5. Alu Rail
6. Rail Step
7. End Caps
8. Rubber Strip
