

UPM ProFi® Deck, 5 myths busted

ULTRA-DURABLE THROUGHOUT

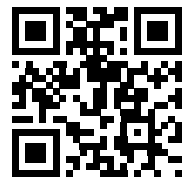

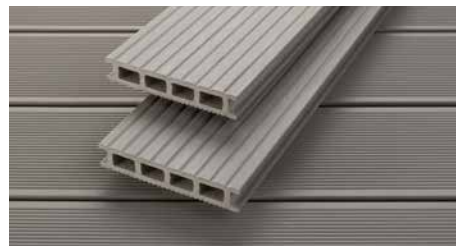

The UPM ProFi Deck range seeks to be the best decking available. Designed and manufactured in Finland and Germany, UPM ProFi Deck provides choice of style and consistency in performance.

All UPM ProFi Deck boards benefit from double protection: a stain resistant surface and an ultra-durable core that will remain structurally sound whether built on the ground, in the ground or even under water.*

This is due to their patented two stage manufacturing process and a fibre content that does not exceed 50%. When fibres are encapsulated in plastic, moisture is not able to soak into the fibres of the deck core. The boards keep their shape also under water.

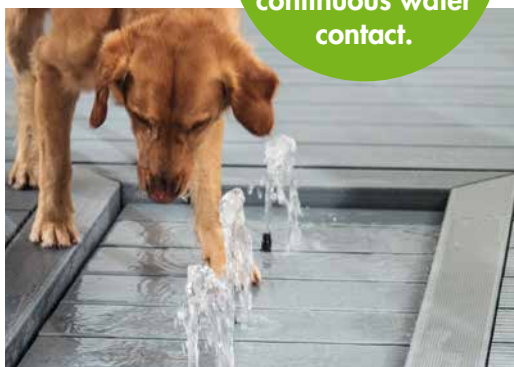

10^{years} of UPM ProFi
Design & Performance

*Under water installation may result in algae growth and minimal expansion of the deck boards.

Video: Ultra-durable throughout

MYTH: Deck boards cannot withstand direct ground contact or continuous water contact.

UPM ProFi Deck is **ULTRA-DURABLE** whether on the ground, in the ground or under-water.

UPM ProFi® Deck, 5 myths busted

BETTER STAIN RESISTANCE

MYTH:
You can't expect
an outdoor deck
to stay clean.

Wipe out the stains and enjoy your outdoor living room!

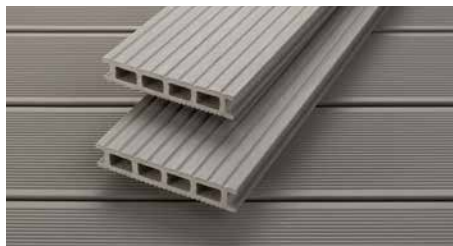

To ensure good stain resistance, the deck should have a closed surface.

UPM ProFi Deck features a non-brushed closed surface. Unlike wood and traditional composite deckings, wine, oil, grease and other liquid spills are not readily absorbed and can be normally cleaned without staining.*

All UPM ProFi products are manufactured using patented composite technology to ensure fine looks that last the tests of time.
