

UPM PROFI[®] TERRA

German quality decking for the home

UPM ProFi Terra is a fine looking composite decking system made in Germany and designed for residential use. As with all UPM ProFi products, UPM ProFi Terra has a unique stain resistant surface that is very easy to keep clean. With a stone like appearance, a smart reversible profile and a simple installation system, UPM ProFi Terra offers a modern solution for any private garden deck or patio.

Superior stain resistance.

High friction wet or dry.

Better colour durability.

Δ0%

Zero degree incline possible.

Splinter free, warm to touch.

Recycled and recyclable.

Easy care decking at home

The superior stain resistant and non-brushed surface of UPM Terra ensures very low maintenance. Unlike wood and many other composite deckings, wine, oil and other liquid spills are not readily absorbed and can be easily cleaned. When the spring comes, the decking requires no sanding, varnishing or painting etc. Normally periodic cleaning with water and a brush is all that is needed.

The German made UPM ProFi Terra has good non-slip properties whether wet or dry. Unlike stone or ceramic tiles, UPM ProFi Terra feels warm to the touch and being splinter free is ideal for bare feet.

The decking system is easy to install and requires no special tools. Due to its closed surface, and unlike traditional composite deckings, UPM ProFi Terra may be installed with zero degree incline. The reversible profile enables creative deck designs and the installation system has been designed for ease, speed and a perfect finish.

UPM ProFi Terra is a member of the UPM ProFi next generation wood plastic composite (WPC) product family. It has a high recycled content and does not contain PVC or any harmful chemicals. The main raw materials are recycled paper fibres and plastics from self-adhesive label waste. By giving these materials a second life as high performance composites, thousands of tonnes of land-fill and waste incineration are saved each year.
